

PRE-TREATMENT CARE – ULTHERAPY® TREATMENT

Ultherapy® is the only non-invasive treatment cleared by the Health Canada and the FDA for lifting the skin on the neck, chin, brow and décolleté. Ultherapy® uses focused ultrasound to lift and tighten loose skin overtime, without downtime.

You don't need to do anything specific prior to your appointment. Ideally, come with a freshly cleansed face/neck/chest. A topical numbing cream will be applied in the office 1 hour before treatment.

Ultherapy® can be uncomfortable at times during treatment. We recommend taking 2x Extra Strength Tylenol 1 hour before, and 2x Extra Strength Advil 30 mins before treatment.

Wear comfortable, loose clothing to your appointment. Prior to your treatment, photography will be taken for comparison on your follow up.
